Nirman Share Brokers Pvt Ltd.

Password Security Policy

Password Protection

We give you a unique Username and Membership Password. In addition, you need to either generate an OTP or you can set up TOTP to log in and transact. This authenticates your identity on our highly secure database. Now, you do not need to change your Password every month. The system has a feature that automatically expires your Password every 180 days, which means you will be forced to change your Password every six months to ensure high security for all your transactions. You can also change your Password 100% online at any time. What's more, you can use the Log Off button located throughout the website to securely exit your account without closing your browser.

Session Control

Our internal Session Manager ensures your account is kept secure by logging you out automatically after 240 minutes of inactivity.

Internet Scanners and Intrusion Detection System

The system maintains a database of attack signatures which is continuously updated and against which it will scan all incoming traffic to detect any malicious activity or hacking attempts into the site. In the event of a possible attack, it will terminate that session, log the attack details and also alert the administrator.
